

# What causes

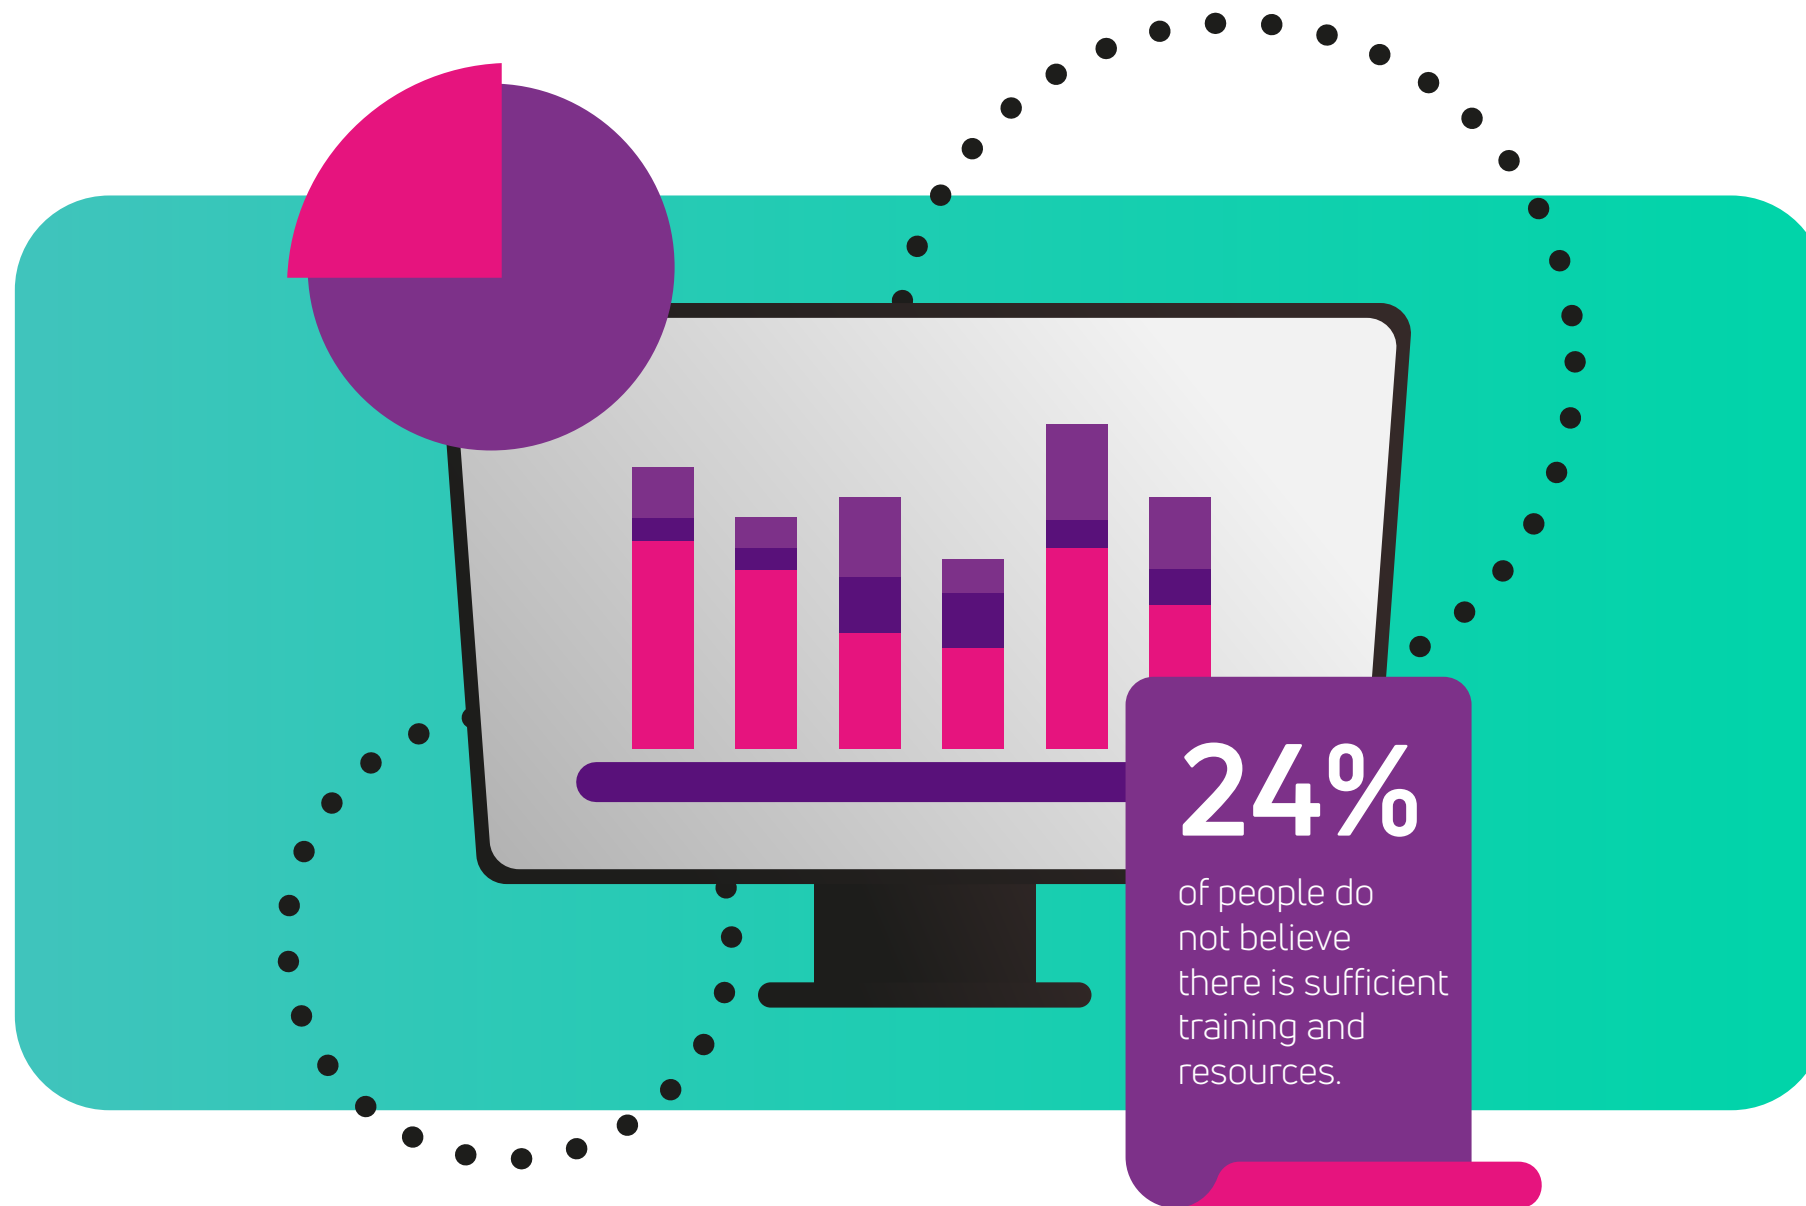

## Good days

vs.

## Bad days

### in the IT sector?

We have more good days because of the access to the right training and resources.

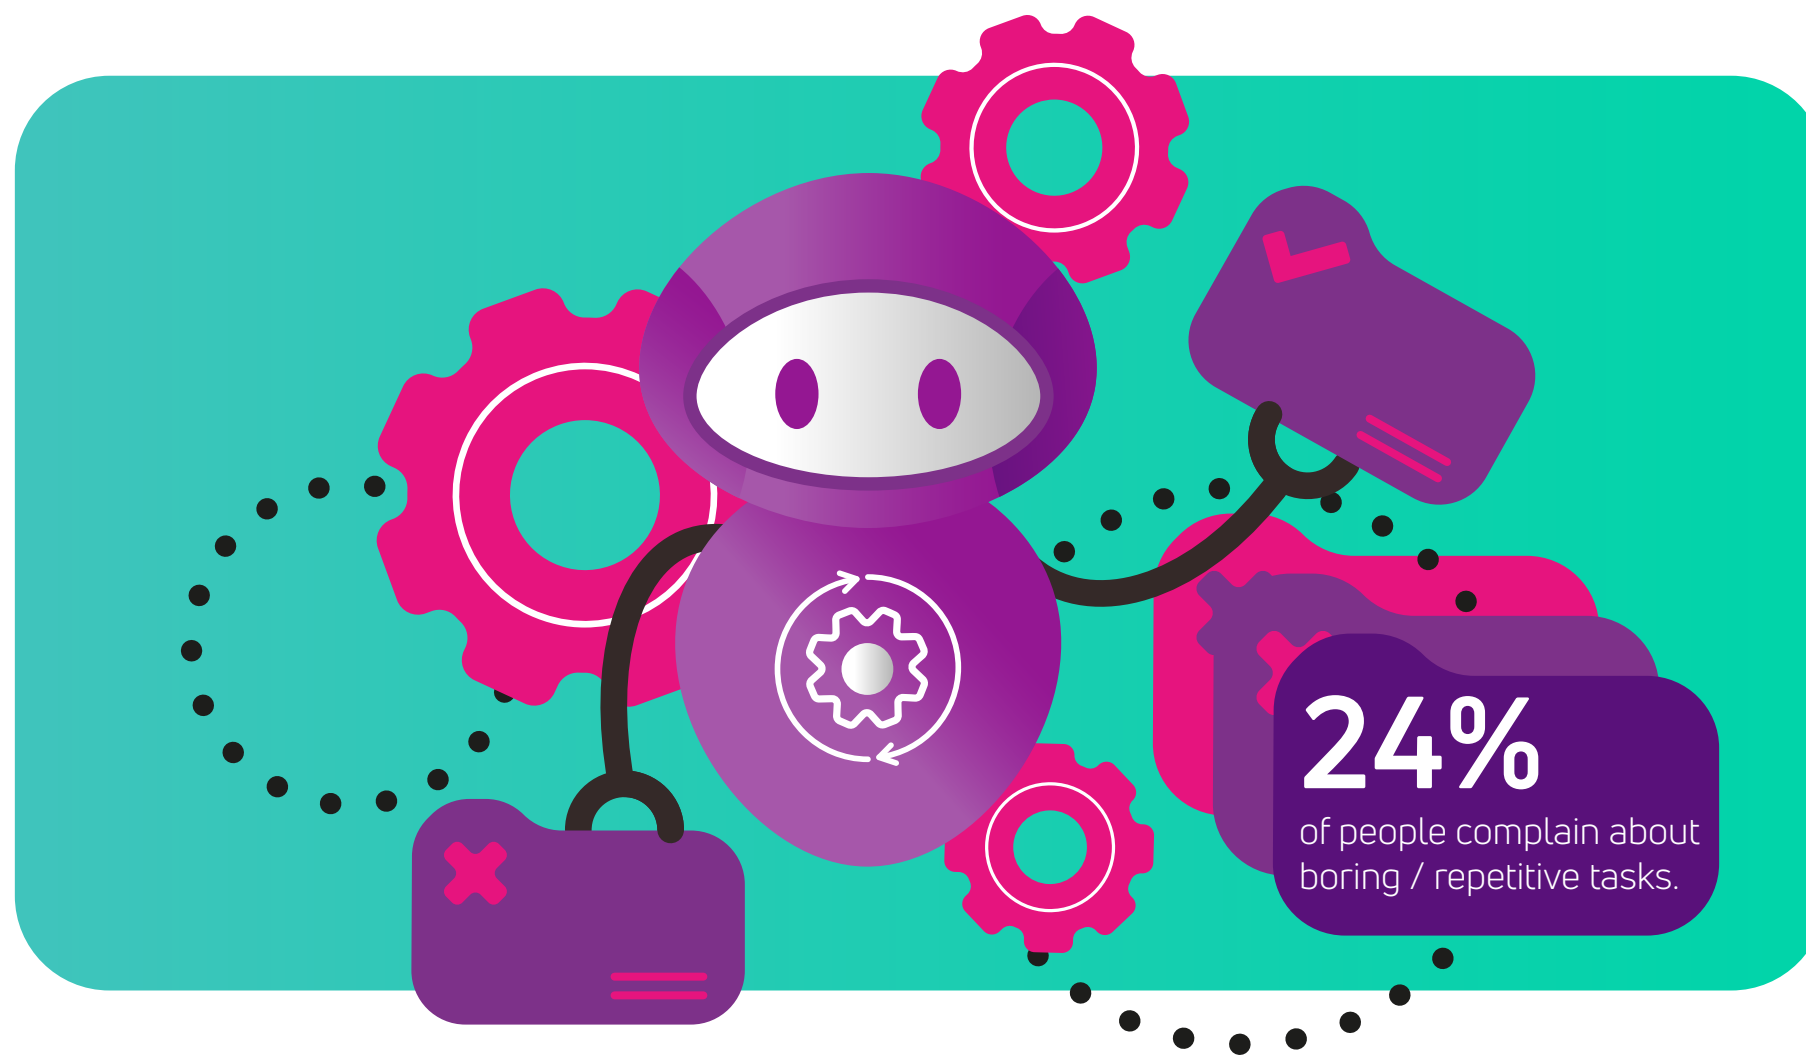

The lack of training and resource continuously causes us to have bad days at work.

Our organisation prioritises security when deploying new technology.

When deploying new technology, security is never a priority causes issues and problems after deployment.

Automating mundane tasks enables us to focus on our roles and deliver business outcomes.

We are unable to prioritise projects and work because mundane and repetitive tasks are not automated.

Reliable security solutions empower us to meet expectations – even when they're increased!

As security threats increase, so has the expectation to overcome them, without the right solutions we are stressed and under increasing pressure.
