INTEGRATION FROM CAE LABS

Individual solutions for
individual challenges

The perfect fit doesn't always happen right away. That's why we design and develop professional applications specifically to meet your needs.

CAE Labs provides a software development practice and the expertise to design, develop and deliver professional applications, built for tight integration with different Cisco API driven platforms such as Cisco Meraki.

Each year the IT industry pivots further towards a software centric approach, making a software development offering more relevant than ever. Through our differentiated service offering we overcome common and new challenges that a vendor's platform doesn't always address or solve.

Countless possibilities

The possibilities are endless when it comes to developing professional problem-solving solutions for our customers that can save you time, money, and valuable resource. Through our consultative app-first approach, CAE walks you through your specific challenges as well as your required technical and business outcomes.

Technology scope

At CAE Labs, our focus is on the successful integration of Cisco and Meraki platforms; however, we have the capability to branch out into other technology stacks – subject to customer requirement. Delivery of a new app can typically be completed, and quality assured in two to four weeks, subject to scope.

Better Outcomes - More Good Days

We focus on building long term trust with our customers, so they can achieve better outcomes for the long term. Our app-first approach helps our customers to:

> Speed the time to market through rapid adoption and change at scale
> Enable CapEx savings due to automation and efficiencies
> Lower migration costs from legacy technology to new
> Automate existing, complex, and repetitive processes leading to reduced OpEx costs
> Rapidly deploy new technology within the business
> Right-size, agile professional services effort
> Audit and compliance of thousands of devices or sites
> Create greater quality assurance and better project outcomes
> Achieve better ROI through improved and better adoption of technology investment
> Integrate existing business processes and IT systems with the Cisco / Meraki platforms for better value return and tighter integration

Could an automated approach be the right solution for your project?
