NETWORK INTELLIGENCE FROM CAE LABS

A good decision makes a good day, base it on data you can trust

With the ever-increasing demands on modern businesses to transform digitally and drive more business insight and intelligence from technology, the challenge to keep a consistent handle on the lifecycle and operational health of your infrastructure assets continues growing. This is not a new challenge, and it certainly isn't going to go away at any stage in the future.

CAE has developed a range of simple customer focussed operational services, with the sole objective of adding value to our customers; value in the form of saved operational time and insights.

Countless possibilities

In no time at all, Cisco Meraki can join Network Intelligence using a read-only API key or for Cisco EN we can access remotely and deploy the Cisco Smart Collector. Giving you up to 12 available widgets – all providing you with actionable insights.

Complete visibility, actionable intelligence

Network Intelligence is a single lens dashboard that gives you complete visibility of the infrastructure health and lifecycle of your Cisco and Meraki assets.

In partnership with Cisco and powered by our CAE Labs innovation team, this simple and easy to use platform gives concise visibility of software, hardware and licensing along with benchmarking for performance and health.

Network Intelligence gives you the ability to take control. Regular maintenance reporting and support cover to software vulnerabilities and security alerts all in one simple and easy to use dashboard. Highlighting potential risks improves risk management and budget planning.
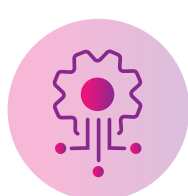

Benefits of Network Intelligence

> Identify hardware that is not covered by an SLA
> Improved risk management
> Highlight potential operational risks and vulnerabilities
> Initiative and budget planning assistance
> YoY & MoM benchmarking performance
> Monthly snapshot report emailed directly to you
  and your team

Book a demo to see the value of Network Intelligence for yourself.
After your demo, we can set Network Intelligence up on your system
remotely all in under 30 minutes.
